FS2004 B57B USAF Canberra

Description: This is the fifth aircraft release in my Canberra series. Designed using FSDS 2.4. I must thank the many people who assisted with this project with a special mention Warwick Carter for further assistance with learning the many new tricks in using FSDS and helping with the animations, Dave Friswell for all his work on the original Air file which I believe is darn good and all of the guys at Aussim who gave the encouragement and assistance with all my models. This release has an active, animated pilots virtual cockpit, opening bomb bay, bombing sequence, opening canopy, ejection sequence, access ladder, and chocks and blanks when parked. Forum <http://www.aussim.com.au/default.asp> Bill Holker
