FS2000/FS2002/FS2004/FSCOF Courseplanner

Description: Stand alone flight planner, color world map and complete flight management. Use YOUR own scenery, (airports, nav aids, etc), and all the planes in your hangar. Monitor your progress, all the AI traffics, (and multiplayer), real time on the internet and intranet as well as altitude, speed and more. Use Courseplanner over the network, (Courseplanner on one machine and FS on another), or on the same machine. Runs independently to FS, (you do not even need to have FS running). Import/Export flight plans and/or adventures. Create printable maps, (en route, departure, landing airport, ILS etc), as well as the briefing files. Courseplanner will fly the aircraft for you and even pause the flight near the airport, or any point for that matter. Extensive 70 pages document as well as an SDK in C++/VB, (for our module). (Works with or without the FS2004 9.1 patch.) by <http://www.myoddweb.com>.
