FS2004 (ACOF) Enunciator Indicator Lights

Description: This package contains brand-new xml gauges to implement the missing Reverser Unlocked Indicator Lights into the default B737-400 and Lear 45 panels. It also installs the missing AT LIM Indicator light into the B737-400 panel, together with new xml gauges for the Low Oil Pressure and Start Valve Open Warning lights. A fix for Gear Warning Lights is also included. These newly-designed gauges match the original effect of what Microsoft should have done themselves and will hopefully manage to get working by default in FS2006. Fully realistic as all former technical display problems are solved now. Also compatible with FS2002. By Ulrich Klein.

FS2004 Bird Collection Team Rwy12

Description: This collection is for users of Rwy12 Object Placer only. The collection includes 5 birds in 20 different configurations. Part as single birds and part as flocks. All birds are 3D and done in gmax. The collection is based on the idea of Joe Binka who created then AI_Geese V formation. Oposite to Joe's birds who move as AI traffic, these birds are static and you can place them anywhere in your scenery. Flying by the objects will give you a sense of movement. I used one of Joe's texture files in this library and I thank him for his permission to do so. Bird Collection by Seev Kahn, Team Rwy12 <http://www.rwy12.com/>
